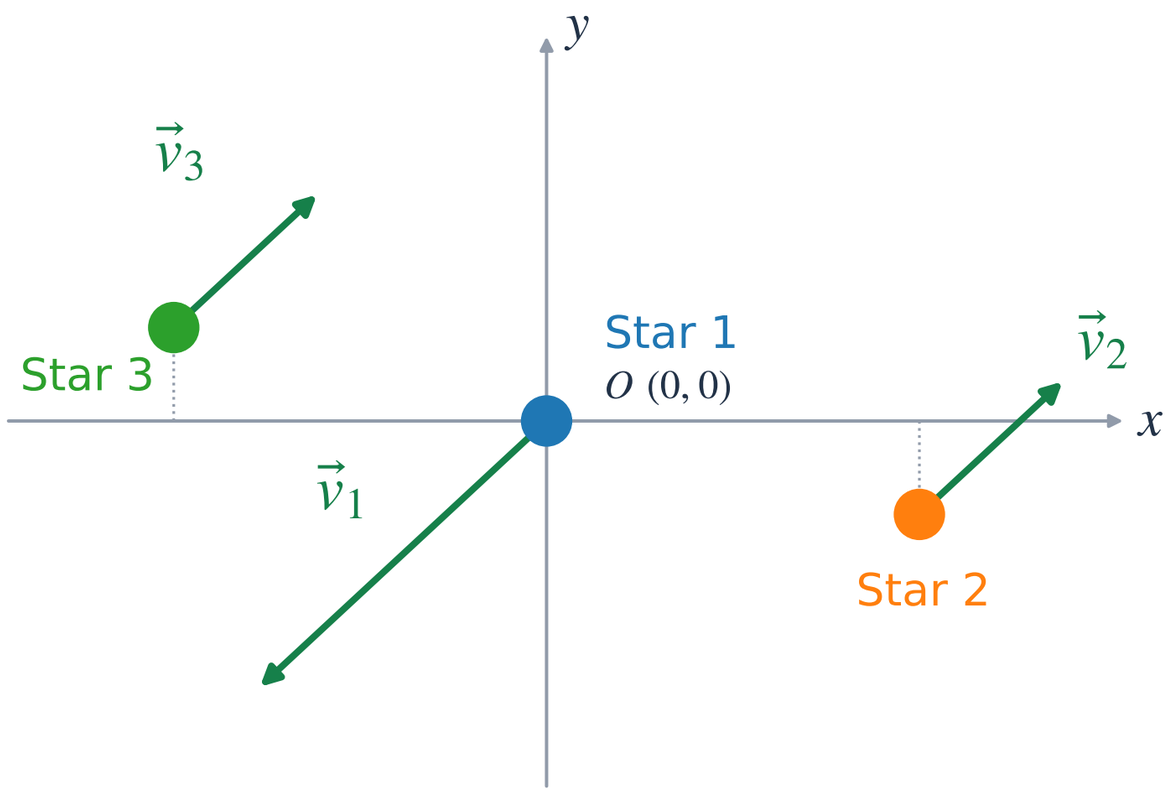
Three stars: second set of initial conditions



Star 1: at the origin

$\vec{r}_1 = (0,\ 0)$

$\vec{v}_1 = (-0.93240737,\ -0.86473146)$

Star 2

$\vec{r}_2 = (0.97000436,\ -0.24308753)$

$\vec{v}_2 = (0.466203685,\ 0.432365730)$

Star 3

$\vec{r}_3 = (-0.97000436,\ 0.24308753)$

$\vec{v}_3 = (0.466203685,\ 0.432365730)$

$Gm_1 = Gm_2 = Gm_3 = 1$ | $\vec{v}_2 = \vec{v}_3 = -\frac{1}{2}\vec{v}_1$

Green arrows show initial velocities on a common scale; they do not show forces.
